W	ENDING SHELTER COUNT (date)	2096	2282	4378

In a perfect world, the Ending Count is equal to the Beginning Count (A) plus Total Intake

(F) minus all Outcomes (R+V). -----> 2136 2325 4461

If your reported Ending Count does not match these numbers, please go back through your data and be sure you didn't miss something (i.e., animals in foster, adoptions, transfers, etc.). If all animals have been accounted for and the reported Ending Count is different, please indicate in the comment section.

Our Asilomar "Beginning Shelter Count" from the start of Period B (2017) and the Asilomar "Ending Shelter Count" from the end of Period A (say, 2016) does not match because Beginning shelter count counts *all* animals in custody, no matter how they came in (could include born in care, owner-intended euthanasia, adoption return, etc). Intakes includes only owner surrender and transfer in. Outcomes catches all types. End count on the form is simply= start count plus qualifying intakes minus all outcomes Therefore any non-qualifying intakes during the period will appear in the "beginning count" at the start of the next period, causing beginning count to not match end count of prior period. Our adoption return and born in care drive the bulk of the discrepancy.

I agree that in completing this form, we have used the Maddie's Fund definitions of "Healthy," "Treatable - Manageable," "Treatable - Rehabilitatable," and "Unhealthy & Untreatable" as set forth in the attached document titled, "Maddie's Fund® Categorizations/Definitions of Shelter Animals."
